ASSEMBLY INSTRUCTIONS

Attach axle holders to the corners of the car chassis with two screws each as shown in photo #1. Then thread both axles through the axle holders (photo #2) and attach wheels. Mount the DC motor, battery holder and switch to the car chassis as shown in photo #4. Connect one of the battery leads directly to the DC motor. Cut the other lead wire in half and connect it to the motor via switch. Finally, attach the propeller to the DC motor. You are now ready to test your new Fan Car! If needed, switch the polarity of your wire connections to the DC motor.
